Serial No. 042,906 Art Unit 2512

Applicant must correct the reference to the parent application on page 1 to state that this application is a continuation-in-part.

Claims 1-22 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is incomplete. The preamble recites "a magnetic head suspension assembly for transducing data" but the body of the claim fails to recite the head or how it is attached to the structural elements listed. The suspension elements listed do not by themselves produce transducing of data.

The following are indefinite or lack antecedent basis:
"tongue" (claim 1), "outriggers or a split tongue" (claim 3),
"the outer edges" (claim 3), "a platform" (claim 7), "said split tongue" (claim 11), "lateral part" (claim 11), "said leaf spring section (claim 17), and "enabling" (claim 22).

In claim 1 the orientation and configuration of the load beam elements and the flexure elements is unclear. The recitation that the load beam "sides" project into the flexure section is confusing and not accurate.

In all the claims the orientations of the listed elements is unclear.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under

Serial No. 042,906

Art Unit 2512

this section made in this Office action:

A person shall be entitled to a patent unless -
(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-5, 13, 21 and 22 are rejected under 35 U.S.C. § 102(a) as being anticipated by Matsumura et al.

Note figure 4. Matsumura et al. shows a unitary load beam/flexure assembly. The cutouts at the end provide the side, tongue, etc features listed. The claims do not recite the orientations and configurations involved to define over Matsumura et al.

Claims 1-5, 9, 10 and 12-20 are rejected under 35 U.S.C. § 102(e) as being anticipated by Blaeser et al.

Note figures 4-6 and 7-11. Blaeser et al shows a unitary load beam/flexure assembly. The cutouts at the end provide the side, tongue, etc features listed. The claims do not recite the orientations and configurations involved to define over Blaeser et al.

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

Serial No. 042,906

Art Unit 2512

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 6 and 11 are rejected under 35 U.S.C. § 103 as being unpatentable over Matsumura et al or Blaeser et al.

Matsumura et al and Blaeser et al show unitary load beam/flexure assemblies substantially as claimed. Both differ only in not specifying the listed dimensions.

Merely changing size is not patentable. See <u>In re Rose</u>, 220 F.2d 459, 105 USPQ, 237 (CCPA 1955); <u>In re Yount</u>, 171 F.2d 317, 80 USPQ 141 (CCPA 1948), <u>Gardner v. TEC Systems</u>, <u>Inc.</u>, 725 F.2d 1338 (Fed. Cir. 1984).

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which

Serial No. 042,906

Art Unit 2512

the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 7, 8, 21 and 22 are rejected under 35 U.S.C. § 103 as being unpatentable over Blaeser et al in view of Brooks, Jr. et al.

Blaeser et al shows a unitary load beam/flexure substantially as claimed except for not showing the configuration of the top of the slider. Brooks, Jr. et al shows a "stepped" top configuration. Brooks, Jr. et al states that such is an improvement over the normal flat top. Thus both configurations are known. It would have been obvious to use any known top configuration because Blaeser et al clearly intended that any known slider be use with his suspension.

Concerning claim 8, as noted above, a mere change in size is not patentable.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to R. Tupper whose telephone number is (703) 308-1601.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0956.
